(54) OPTICAL DISK DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To reduce coma aberration generated by the skew of an optical disk.

SOLUTION: A liquid crystal panel 20 is made of a transparent member having a convex face and a transparent member having a planar surface. A liquid crystal panel 30 is constituted of a transparent member having a concaved face and a transparent member having a planar surface. The panels 20 and 30 are arranged in prallarel with each other with a deviation S with respect to an optical axis in a vertical direction and inserted into the path located between a light source and an optical disk which is illuminated by the light beams from the source. The voltages applied to the panels 20 and 30 are controlled in accordance with the skew of the disk.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
